

CERVICAL CANCER SCREENING

MODULE 1

CANCER PREVENTION

UNIT 1

Principles of screening

1.1 NATURAL HISTORY OF THE DISEASE AND TYPES OF CANCER PREVENTION

The natural history of the disease is the progression of a disease over time and understanding how it evolves is fundamental to learn what can we do to avoid its progression.

Many diseases have certain relatively well-defined and well-known stages in which different types of preventive measures can be applied (FIGURE 1).
